

WATERTIGHT ACCESS RISER

ACCESSORIES FOR FLOWTITE® WATER TANKS

Flowtite® water storage tanks from Containment Solutions have gained popularity due to the inherent watertight nature of our fiberglass tank design. Now your water storage system can be watertight between the access collar and the access riser.

Our watertight collar/riser joint was derived from the same proven technology we have used for nearly 20 years in the petroleum industry. A watertight enclosure protecting an access opening is the only way to eliminate infiltration and exfiltration contamination. The access opening is the most vulnerable entry point for contaminants into any water storage system. Your system deserves to be watertight not simply water resistant and a Flowtite tank with watertight access collars are the best way to protect your investment.

FEATURES AND BENEFITS

- Watertight bond with CSI two part Adhesive Kit.
- Access collars available in 24", 30", and 36" diameters.
- Adhesive channel accommodates industry standard PVC pipe.
- Fiberglass or PVC access risers are available in 12" increments and are field adjustable.
- Composite covers available for all riser sizes (load rated to 2,500 pounds).
- Fiberglass Hinged and Locking Lids for aboveground applications.

ACCESS COLLARS

Fiberglass access collars enclose an entry point into the tank. The collars are built to a controlled outside diameter (O.D.) so standard sized 24", 30", and 36" PVC or fiberglass risers properly align.

Contact your local CSI representative if you are interested in diameters larger than 36".

ADHESIVE KITS

The CSI adhesive kit is the easiest and most reliable way to install access risers for a watertight and permanent bond.

Installation procedures require:

- 1) Mixing the two part adhesive
- 2) Applying the adhesive into the channel (PHOTO RIGHT)
- 3) Setting a riser into the factory supplied channel

ACCESS RISERS

CSI offers fiberglass and PVC risers in 24", 30" and 36" diameters. The standard riser extension is available in 2', 3', 4', 5', 6' and 7' lengths.

WATERTIGHT ACCESS COLLAR WITH ADHESIVE CHANNEL

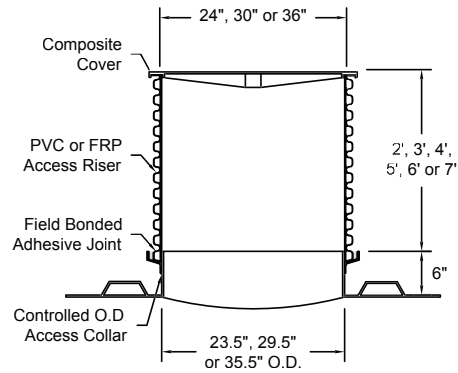

AVAILABLE LIDS

Composite fiberglass lids are available on FRP and PVC risers. These lids are lightweight and non-corrosive. They are fastened with stainless steel hardware to restrict accidental entry. Optional locking kits are available for most risers and recommended by CSI as an added security precaution.

Additional water resistant, hinged, and locking lids are available in fiberglass designs.

FRP Access Riser with Hinged & Locking Lid

PVC Access Riser with Composite Lid

Adhesive channels are factory bonded to the exterior of our access collars. The adhesive channel allows for a watertight connection between the tank collar and riser using the CSI supplied adhesive kit (AC-AD Kit). Adhesive is applied to the access collar channel prior to inserting the access riser. Our adhesive kits are designed to work with any riser purchased from Containment Solutions.
